New Haven, CT 06513

Dear prospective Util Auditors client,

At the Phoenix Press our goal is to be the greenest, most energy efficient, commercial printer in the United States. Sustainability and business efficiency is very important to us and our customers. We work towards that goal in every way possible. Our biggest contribution is our very own 100 kilowatt wind turbine providing us with electricity to operate our printing presses.

As everyone knows, the printing industry is very competitive. To further enhance and streamline our efficiency efforts we partnered with Util Auditors to see if there were opportunities to reduce our operating costs with a no cost review of our utilities and various service contracts. To our surprise, Util Auditors informed us of savings opportunities, but more importantly, recovered cash from billing errors on our gas and electric invoices. They effectively facilitated the entire process of recovering lost revenue due to erroneous billing errors for which we were unknowingly being charged. Of course, we are enjoying the billing reductions going forward since they have lowered our operating costs.

The staff at Util Auditors were a pleasure to work with. I recommend anyone to take advantage of their services to make any business as efficient as possible.
Thanks again, and I wish your continued success.

Brian Driscoll
President
